

## **Nadia Charalambous**

Nadia Charalambous trained as an architect and has been working as an academic and researcher at the University of Cyprus since 2008. Before assuming her current position at the University of Cyprus, she was the Head of the Architecture Department at the University of Nicosia, where she undertook the responsibility to achieve academic accreditation of the BA in Architecture program and taught courses in architectural design (studio) and architectural theory. She studied Architecture at the Bartlett School of Architecture, University College London, University of London where she received her BSc. in Architecture and Environmental Studies, M.Sc. in Advanced Architectural Studies and the Diploma in Architecture. She subsequently completed her Ph.D. studies at the National Technical University in Athens, NTUA. Underpinning all research and professional activities is a continuous interest in the complex relationship between urban form and social phenomena, both in the education and in the practice of architecture. The complex relationship of spatiality and sociability is approached from a variety of analytical perspectives, including both quantitative as well as qualitative research tools. Past and planned research activities acknowledge the need for a multidisciplinary approach to take account of both the spatial, social and other aspects of the built environment.
